

# Global Collaboration: IBAC's Modus Operandi

IOAC 2003, Honolulu, HI 17 November 2003

# About IBAC

- founded 1981
- comprises 11 national / regional bizav associations
- Mission.....to enhance the safety, security, acceptance and economic contribution of bizav globally

# About bizav

- driving productivity gains & economic growth
- 22,500 turbine-powered aircraft incl,  
12,000 turbojets
- 14,000 operators

# The business aircraft

# Safety & Efficiency

- safety & security uppermost
- operational efficiency a factor, but
- flexibility is paramount
- preserving versatility is essential

# Airspace Access

- three priority issues after safety & security

ACCESS

ACCESS

ACCESS

- airspace access must be equitable

# The business plan myth

- no traditional business case for ADS/CPDLC equipage
- the driver; preserving airspace access
- pursuing the paradoxes

# < RNP 10

- RNP 4 = DCPC = CPDLC + ADS
- bizav access likely S cost >> RVSM
- FANS 1/A or equiv not available!
- a reasoned response

# Exclusionary vs benign

- ? flexibility
- ? hybrid RNP 10 & 4
- ? Horizontal stratification
- the challenge...  
    think outside the box!

# Charges Incentives

- introduced by one NAT ANS provider
- contemplated within Eurocontrol
- long term consequences?
- setting a broader precedent
- marginalizing minority interests

# ANSP Alliances

- economies of scale
- harmonized implementation
- leading to ?...

IOAC 2003, Honolulu, HI 17 November 2003

# The three way street

- the business & commercial interests of privatized ANSPs & airlines are intrinsically coupled
- but....the primary customer of ANSPs is not an exclusive customer
- collaboration is a three way street..  
**ANSPs + Airlines + Bizav**

# The final 

- preserving airspace access is paramount !

# Mahalo

Thank you for your  
kind attention
